Product Overview

Four-station jar mill for superfine grinding and mixing in lab and small batch production. Compact, efficient, uniform particle size. Ideal for research, teaching, and production.

Product Introduction

Tank ball mill, also called roller mill, is an ultra-fine grinding and mixing equipment used in laboratories and small batch production. This machine is beautiful and novel, has a compact structure, is easy to operate, has high working efficiency, and has uniform grinding size. It is the preferred equipment for scientific research, teaching, testing, and production. It can be widely used in electronic materials, magnetic materials, biomedicine, ceramic glaze slurry, metal powder, non-metallic minerals, new materials and other industries. The machine has a novel appearance, advanced structure and is easy to use. The rotating speed of the tank of this machine is optimized, and the tank is rotated by the rubber roller, which can make the medium balls in the grinding tank form a tilting motion to disperse the materials and obtain a suitable grinding effect. The tank mill (rolling table machine) is controlled by a digital display time controller. The working time can be set at any time as needed, and it has pause and cumulative timing control functions. The operation saves time, effort, and is easy and convenient.

1. Multiple samples can be ground at the same time;
2. Can operate intermittently or continuously ;
3. Able to time according to requirements ;
4. Suitable for fine grinding of materials with high crushing efficiency ;
5. The tank load-bearing rubber roller is made of special materials and is durable.

**Modern Appearance, Compact Structure**

Attractive appearance, easy operation

Optimized Speed Design

The jar is driven by rubber rollers to rotate, achieving excellent grinding results

**Fine Workmanship, Easy Jar Replacement**

Precision-built, durable and reliable
Easy jar replacement, high efficiency,
uniform grinding fineness

* Optional: [Hand Crank Device] and [Auxiliary Rotation] only support 2 stations, 4 stations, and 8 stations. ; [Protective Cover] Supports the purchase of all series ;

Working Principle

When the tank mill ball mill is working, the grinding media and materials in the cylinder are raised to a certain height with the rotation of the cylinder, and fall away from the cylinder wall due to gravity and fall along a parabola. The materials are crushed under the impact of the grinding media and the friction and shear caused by the rolling and sliding of the grinding media.
