Product Overview

Lab roll ball mill rotates grinding media and material in a cylinder. Media rise and fall by gravity, crushing via impact and friction. Ideal for fine grinding in laboratories.

Product Introduction

When the laboratory drum ball mill is working, the grinding media and materials in the cylinder are raised to a certain height with the rotation of the cylinder, and fall away from the cylinder wall due to gravity and fall along a parabola. The materials are crushed under the impact of the grinding media and the friction and shear caused by the rolling and sliding of the grinding media.

Variable Frequency Control

The speed can be adjusted according to experimental requirements, up to 570 rpm (roller speed, not jar speed).

Milling Jar

Compatible with different roller jars; the jar can be replaced directly.

Driven Rubber Roller

Adjustable and compatible with jars of different sizes; easy to install.

Laboratory drum ball mill is an ultra-fine grinding and mixing equipment used in laboratories and small batch production. This machine is beautiful and novel, has a compact structure, is easy to operate, has high working efficiency, and has uniform grinding size. It is the preferred equipment for scientific research, teaching, testing, and production. It can be widely used in electronic materials, magnetic materials, biomedicine, ceramic glaze slurry, non-metallic minerals, metallic minerals, new materials and other industries.

* The contents of the above table are reference technical parameters. For specific parameter values, please contact our salesperson or technical personnel for communication and confirmation.;

* Optional: [Hand Crank Device] and [Auxiliary Rotation] only support 2 stations, 4 stations, and 8 stations. ; [Protective Cover] Supports the purchase of all series ;

Product Features

1. This machine has compact structure and simple operation;
2. High working efficiency and uniform grinding particle size ;
3. By adjusting the driven rubber roller, ball mill tanks with different outer diameters within a certain range can be used. ;
4. It is easy to change the can, and can be used for dry or wet grinding.

Accessories & Customization

Accessories

Grinding jars, heating elements, sample holders, control modules and other matching accessories can be selected according to the product configuration.

Customization

For voltage, capacity, chamber size, process temperature or application requirements, please contact TENCAN for a suitable configuration.
